Mission:
POSSIBLE
 Cleaning Assessment Program

MISSION: Upkeeper Corporation is committed to providing effective and economical solutions to difficult cleaning needs. This commitment will be undertaken only with the implementation of the highest quality standards and product dependability.

Letter from the C.E.O:

Upkeeper Corporation is not interested in just selling machines but strives to provide a cost effective, common sense solutions that work for you.

Many companies dispose of inefficient cleaning machines– the result of not matching the right product to the particular application.

Most people judge a vacuum cleaner by the suction felt when they place the hose against their hand. If the suction feels strong enough to suck the chrome off a trailer hitch or pick up a bowling ball, they think it is powerful enough to satisfy their cleaning requirements. Well there is a lot more to it than that. Solutions for tough cleaning problems depend on many elements:

- ? **TYPE OF DEBRIS** - *dry, wet, oily, hazardous*
- ? **VOLUME OF DEBRIS**
- ? **WHERE TO CLEAN** - *overhead, under-foot, around machinery*
- ? **SPECIAL TOOL** *requirements for reaching in and around machinery or over head up to 25 feet*

- ? **POWER REQUIREMENTS** - *electric, pneumatic, or mechanical*
- ? **WHAT TYPE FILTRATION** - *cloth, paper, HEPA, etc.*

All of these elements must be considered. After we conduct a simple analysis, we can make an intelligent recommendation on the ideal solution for solving your specific cleaning needs. The information we collect will dictate whether you need high static pressure (water lift), low static pressure, massive airflow, and electric, pneumatic, or mechanical power requirements. We will also consider the capacity of debris you are collecting, the ease of use around machinery, equipment, and the appropriate filtration.

We will even advise you if a simple tool such as a broom is the best solution for your cleaning needs. After all, brooms have been manufactured for over 5,000 years.

If we do not have the solution for your particular needs, we will gladly refer you to a company or manufacturer that may provide an appropriate solution.

Therefore contact one of our application specialists at **1-800-451-3466** and they will be happy to conduct an analysis of your specific cleaning needs.

To deserve your business we must earn your trust and confidence. This is why we offer an unconditional satisfaction guarantee. After placing your order, if you are not completely satisfied, simply return the product. We will continue to work with your personnel to develop a solution for your difficult cleaning problems.

Paul C. McIntyre
 CEO

Mission:
POSSIBLE
Cleaning Assessment Program

Upkeeper's Cleaning Assessment Program

• *It's this simple...*

With the Mission Possible Program, diagnosing cleaning problems becomes a series of questions and answers. This is a simple process. Either complete the enclosed Cleaning Assessment forms or contact one of our Cleaning Assessment Specialists, who will analyze your cleaning needs and problems.

• *Recommending a Cleaning Strategy...*

Upon receiving your completed Cleaning Assessment forms via the telephone or fax we will assess your cleaning problems and diagnose your cleaning needs. Once this is satisfactory to you and to our Cleaning Assessment Specialist, we will then recommend an effective strategy for your company and provide a quotation for the necessary equipment. Once approved by your company we will ship the equipment to you for a 7-day trial period. During this trial period our Cleaning Assessment Specialists will continue to assist you with any questions you may have via telephone or fax.

• *Our Guarantee...*

If you are not completely satisfied with our recommendations simply return any of our products or accessories within the 7-day period. With our years of experience in solving difficult cleaning problems for many industries, we offer you satisfaction or your money back- **GUARANTEED.**

Voyager® Turbo Upright

Features:

An advanced impact-resistant turbo fan creates powerful 500 CFM airflow.

Motor peaks at 5 HP to pick up bulky debris with ease.

Heavy-duty die cast aluminum housing for long term use.

Five position adjustable height for various debris and maximum efficiency.

Easy to empty zippered collector bag is machine washable.

Designed to clean debris, leaving drills, router bits and other valuable hardware behind.

20" cleaning path for large areas and aisles.

No belts or beater brushes to maintain or replace.

Cleans efficiently against walls and in corners.

Comes complete with 50 ft., 16 gauge grounded extension cord.

Five year limited warranty.

The original model UPKEEPER has been unsurpassed in cleaning bulky waste and debris from any hard surface. Oversized 20" scoop cuts a wide path through debris that clog ordinary vacuums. Recessed wheels allow for easy edge cleaning without the need for special attachments. Wheels can adjust height of intake scoop to get maximum lift.

Typical Applications:

- Lint/Fiber • Threads
- Scraps • Shavings
- Clippings • Plastic Pellets
- Sawdust • Peanuts • Popcorn
